

I can't believe what I'm hearing! My husband and I commute over 60 miles each way to work and we enjoy our commercial free music on XM radio. We purchased the units and signed up for service so that we had an option to listen to music or news instead of a bunch of useless morning show talk. When the weather and traffic channels arrived we were so pleased. My husband and I listen to it every day on the way in to work so that we know if there are traffic problems ahead. Before XM, I had to take my chances on whether I was going to hit a radio station at the perfect time between talk and commercials to find out what was happening with traffic. Now I know with just a touch of a button. As a closing, all I can say is that my husband and I pay for XM service and the services that are provided are well used and I don't want to lose them due NAB's petition 04-160. I urge you to reject petition 04-160 and let the XM listeners continue receiving the services they need, use and pay for.
